

# SOW Document to **Peer Competitor Analysis Dashboard**

## **Document Summary**

Author: Ayush Jain

Last Update Date: 23-July-2026

CR Version Number: 1.0

Project Name: Peer Competitor Analysis Dashboard

This statement of work is proprietary of Freshbus Private Limited and contains trade secrets and confidential information which is solely the property of Freshbus. This statement of work is intended for **Freshbus Security** internal use only. Therefore, it shall not be used, reproduced, copied, disclosed and transmitted, in whole or in part, without the express consent of Freshbus.

## Technical Evaluation

- Received By: Udbhav Mishra
- Date Received: 22/07/2026
- Date Assigned: TBD (Based on sign-off)

## Project Overview

The objective of this initiative is to build a centralized **Peer Competitive Analysis Dashboard** that enables FreshBus to continuously monitor, benchmark, and analyze competitor performance across key customer-facing platforms.

The dashboard will consolidate publicly available customer feedback from **Google Play Store, Apple App Store, Google Search Reviews, and Redbus** into a single analytical view, eliminating the need for manual platform-wise analysis.

This solution is intended to support data-driven decision making by enabling stakeholders to:

- Monitor competitor ratings, review volumes, and customer sentiment from a single platform.
- Benchmark FreshBus against key competitors across multiple digital touchpoints.
- Identify competitor strengths, weaknesses, and emerging customer pain points.
- Track historical performance trends and detect significant changes over time.
- Uncover opportunities for product, service, and operational improvements based on customer feedback.
- Reduce manual effort involved in collecting and analyzing competitive intelligence.
- Establish a scalable foundation for advanced capabilities such as AI-generated business insights, and conversational analytics.

The dashboard will serve as a centralized source of competitive intelligence, providing timely, structured, and actionable insights to support strategic planning, customer experience improvements, and market positioning.

## Problem Statement

Competitive performance data is currently distributed across multiple public platforms, making it difficult to monitor, compare, and analyze competitors efficiently.

Key challenges include:

- No centralized view of competitor ratings, reviews, and customer sentiment.
- Manual effort required to collect and compare data across platforms.
- Limited visibility into competitor trends and performance over time.
- No standardized benchmarking of FreshBus against competitors.
- Absence of route-level competitive intelligence and consolidated customer feedback analysis.
- Delayed identification of market opportunities and competitive risks.

As a result, competitive analysis is time-consuming, fragmented, and less effective for supporting timely business decisions.

## Scope

The Peer Competitive Analysis Dashboard will provide a centralized platform to analyze and benchmark competitor performance across multiple customer-facing platforms.

### Phase 1

The dashboard will include the following analytical modules:

- **Overview Dashboard** – Unified competitive summary, cross-platform benchmarking, leaderboards, and historical trends.
- **Android Reviews** – Google Play Store ratings, review analysis, downloads, customer sentiment, KPI classification, and trend analysis.
- **iOS Reviews** – Apple App Store ratings, review analysis, customer sentiment, KPI classification, and trend analysis.
- **Google Search Reviews** – Google Business ratings, review analysis, customer sentiment, and reputation tracking.

- Redbus Analysis – Route-wise review analysis, sentiment classification, operational parameter comparison, competitor benchmarking, and daily Search Rank Position (SRP) tracking. The module will capture Average Rating, Number of Ratings, Bus Type, Bus Service Timing, Travel Time, and SRP for FreshBus and eligible competitors. Route-level analysis shall include only competitors operating three or more services on a particular route.

## Phase 2 (Planned Enhancements)

- **AI Insights Engine** – Automatically generate business insights, highlight key metric variations, and identify significant trends.
- **AI Conversational Assistant** – Enable users to query the dashboard using natural language and receive contextual responses based on the available data.

## Technical Approach

The Peer Competitive Analysis Dashboard will be developed as a web-based internal analytics application with an automated data collection and processing pipeline.

### Data Collection

- Publicly available data will be collected using automated web scraping.
- Web scraping will be implemented using **Python**, **Playwright**, and the **Chromium browser**.
- Data will be extracted from:
  - Google Play Store
  - Apple App Store
  - Google Search Reviews
  - Redbus
- Redbus analysis will include competitors operating **three or more services on a particular route**, ensuring meaningful competitive benchmarking. The Redbus module will capture Average Rating, Number of Ratings, Bus Type, Bus Service Timing, Estimated Travel Time, and Search Rank Position (SRP) for FreshBus and eligible competitors.

### Dashboard Application

- The dashboard will be developed as a browser-based application using **HTML**, **CSS**, and **Python**.

- Collected data will be cleaned, processed, and transformed into analytical datasets before being displayed on the dashboard.
- Users will be able to compare competitor performance across multiple platforms through a unified interface.

### Data Storage

- The application will use a **local database** hosted on the user's system.
- The solution is intended for **local deployment only** and will not be hosted on external cloud infrastructure during Phase 1.

### Environment Strategy

Two environments will be maintained throughout development:

- **Staging Environment** – Used for development, testing, validation, and feature verification.
- **Production Environment** – Stable version deployed on the local system for end-user access.

### Version Control

- **Git** will be used for source code management, version control, and future enhancements.
- Subsequent releases (including Phase 2 enhancements) will be managed through controlled deployments from the staging environment to the production environment.

### Data Refresh Schedule

#### Phase 1 Dashboard Data

- Dashboard data will refresh automatically:
  - Every **Sunday** during the first three weeks of each month.
  - On the **last calendar day of the month** for the fourth refresh cycle.

#### Phase 1 – SRP Tracker

- Search Rank Position (SRP) data will be collected **daily**.
- Daily tracking will cover:
  - All FreshBus routes.
  - All FreshBus services.
  - Eligible competitor services operating on the same routes.

## Business Rule

The dashboard shall serve as an internal competitive intelligence platform for FreshBus, utilizing only publicly available data from supported sources. Data refreshes shall follow the defined schedule, with Search Rank Position (SRP) tracked daily for all FreshBus services and eligible competitor services. Route-level analysis shall include only competitors operating three or more services on a route. Route-level analysis shall include only competitors operating three or more services on a route. All enhancements shall be validated in the Staging environment before deployment to the local Production environment, with source code managed through Git for version control and future releases.

## Time Estimates

| Life Cycle Stage                           | Estimated (Hours) | Estimated Completion Date | Remarks |
|--------------------------------------------|-------------------|---------------------------|---------|
| Requirement Gathering & Analysis           | 1                 | 23/07/2026                |         |
| Documentation & Wire-frame                 | 1                 | 23/07/2026                |         |
| Designing                                  |                   |                           |         |
| Front-end changes & Admin Back-end changes |                   | TBD – Based on Sign-off   |         |
| QA Testing & Test cases preparation        |                   |                           |         |
| UAT & Fixes                                |                   |                           |         |
| Deployment                                 |                   |                           |         |
| Total                                      |                   |                           |         |

## Change Request Sign Off

With reference to our discussion for the new request, please find annexure for the SOW #1.0. Details document enclosed. If you need any additional information, We would be more than happy to provide the same. We are looking forward to your valued order. Kindly sign this SOW contract below and email back.
